LNG Terminal Expansion Program with technical consultant

Polskie LNG has signed a technical consulting contract with renowned international engineering company. Tractebel – a company managing projects in over 140 countries all over the world will provide technical consulting services within the LNG Terminal Expansion Program.

The main task of the appointed technical consultant is to support the investor in defining the detailed scope of work related with the expansion of the plant and to provide technical assistance in the tender procedure for the expansion of the LNG Terminal. The consultant's scope of duties includes the development of technical documentation for the selection of the General Contractor for the Terminal Expansion Program, i.e. the construction of the second jetty, the third process storage tank and the LNG-to-rail reloading installation together with a railway siding.

- Tractebel's main asset are the experts employed in 33 countries offices around the world having impressive experience in advising on energy projects - said Paweł Jakubowski, CEO at Polskie LNG.

Experts working at a consortium led by a Belgian company are developing baseline project documentation (the so-called Preliminary Front-End Engineering Design) in collaboration with Polskie LNG team. The documents will serve as a reference for establishing the scope of work to be delivered by the EPC contractor (contractor in charge of engineering, procurement and construction).

All documentation as well as construction and assembly work under the expansion program will be developed and performed in compliance with applicable provisions of Polish law and European standards in force.

- It is also worth noting that the technical consultant will be obliged to consider the need to ensure uninterrupted operations of the Terminal throughout the entire course of the Expansion Program implementation - emphasized Paweł Jakubowski.

- Polskie LNG is one of the major players in the LNG sector in Europe. As Engineering & Consultancy Company in LNG, working with key players in the world is essential for Tractebel's sustainability. It gives us also the opportunity to share experience and good practices between two experimented stakeholders of the LNG in Europe. LNG Terminal Expansion Program is of a great importance for Tractebel as it concerns one of the busiest LNG terminals in Europe and represents therefore a technological challenge similar to those which built up our international reputation – said Christian Zech, Project Manager at Tractebel.

About Polskie LNG

Polskie LNG S.A. is the operator and owner of the President Lech Kaczyński's LNG Terminal in Świnoujście. Polskie LNG launched the construction of the plant in 2010, and the LNG Terminal has been in operation since 2016. The LNG Terminal in Świnoujście has contributed to the energy security in Poland and Central and Eastern Europe, as well as it enables the import of liquefied gas to Poland from any direction in the world.

The technological processes and services currently provided by the LNG Terminal include unloading LNG from a LNG carriers at the unloading jetty, LNG process storage in cryogenic tanks, LNG regasification and send-out of natural gas to the National Transmission System, LNG transshipment onto tanker trucks and ISO containers. The LNG Terminal's annual regasification capacity amounts to 5 billion Nm³. The plant also includes two cryogenic tanks for LNG process storage with a capacity of 160,000 m³ each.

About Tractebel

At the helm of the Energy Transition, Tractebel provides a full range of services throughout the life cycle of its clients' projects. As one of the world's largest engineering consultancy companies and with more than 150 years of experience, it's our mission to actively shape the world of tomorrow. With about 5,000 experts and offices in 33 countries, we are able to offer our customers multidisciplinary solutions in energy, water and urban.

Our broad range of expertise extends across Europe, Africa, Asia and Latin America, allowing us to rise to our clients' most demanding challenges with the same high-quality design, consulting and project management services no matter where their projects are. Tractebel is part of ENGIE, a global energy player and an expert operator in the three businesses of electricity, natural gas and energy services. The Group supports changes in society that are based as much on economic growth as on, social progress and the preservation of natural resources.
