

ENVIRONMENTAL POLICY

Tractebel - a leading global player in energy, water and infrastructure engineering - **aims to promote environmentally and culturally friendly sustainable development** and seeks to continually improve its performance in this area.

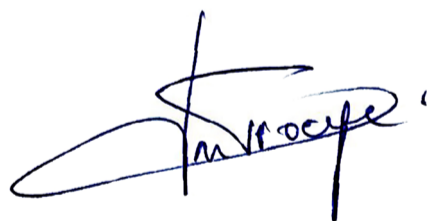

In putting these goals into practice, **Tractebel's management** has focused its environmental policy on four key commitments:

- 1. Anticipate, in order to eliminate** as much as possible and, at the very least, reduce, **the harmful impact on the natural environment and on people** resulting from any of Tractebel's activities and the projects we develop for customers around the world.
- 2. Factor the environment into project lifecycles** so that our customers benefit from environmentally friendly, innovative solutions geared to their needs.
- 3. Make all of our employees and all stakeholders aware** of the environmental challenges and the commitments involved in our policy.
- 4. Comply with ENGIE's policy** on environmental responsibility and with labour and environmental legislation wherever we operate.

Tractebel communicates these commitments to all of its employees and encourages each one of them to act on these undertakings. Management supports the current environmental policy by ensuring that the resources needed for its correct implementation are in place

To realise our policy and continually improve our environmental performance, we are deploying a quality management system that incorporates environmental management in accordance with ISO 14001 and other local certifications.

This Environmental Policy applies to all Tractebel subsidiaries and entities with a view to complying with our global objective of: "Achieving excellence in all our activities by continuously measuring and improving our performance".
