

SAFETY ESSENTIALS

No life at Risk

Preventing
serious and fatal accidents

I know and apply
**the 9 Life
Saving Rules**

I **Stop the Work** that I think
is unsafe. I raise the alert
and we only resume work
when conditions are safe

No life at Risk

Behaviours
to adopt

I do a **Last Minute
Risk Assessment**:
One last check before
starting work as there
may be new risks

I report **events
and incidents** in
order to prevent
the worst from
happening one day

I ensure that **I am vigilant**
for my own safety and
for everyone's safety

SHARED VIGILANCE

Shared vigilance is being vigilant for your own and for everyone's safety.

Alert someone if his or her safety seems threatened, and know how to react to someone who intervenes to protect your safety and wellbeing.

NO LIFE AT RISK

LAST MINUTE RISK ASSESSMENT

One minute to check the work environment before starting an activity.

- ✓ **I stop and observe:** I inspect carefully the workplace and the surroundings
- ✓ **I analyse the work to be done:** what are the different tasks to be performed?
- ✓ **I assess the risks:** are all the safety rules respected?
- ✓ **I perform the task safely:** I only start work having ensured that all safe conditions are met
- ✓ **I check that all risks are under control:** if not, I consult my manager

What could be dangerous?

NO LIFE AT RISK

EVENTS & INCIDENTS

I report events & incidents (HiPo, accidents, near misses, unsafe conditions and unsafe acts) **to learn from them and to prevent the worst** from happening one day.

NO LIFE AT RISK

STOP THE WORK

Not as safe it could be? Stop immediately. It is everyone's duty to help to ensure that we all work safely. Raise the alert and ask questions:

- Why is it not safe?
- How should it be done?
- What actions need to be taken?
- When can work resume safely?

NO LIFE AT RISK

STOP WORK AUTHORITY

Is it safe for you and your colleagues?

You have my authority to stop any job if you think it is unsafe.

Catherine MacGregor,
Chief Executive Officer
ENGIE

LIFE SAVING RULES

If they had been respected, the **life saving rules** would have prevented most accidents.

BE HOOKED UP

Clip on your harness when working at height.

STEP ASIDE

Stay out of the path of moving vehicles, plant and equipment.

MAKE SURE

Only enter a trench if the appropriate wall supports are in place.

CONTROL

Test that the atmosphere is safe before entering a confined space and monitor it as you work.

CHECK

Verify that there is no live energy (mechanical, chemical, electrical, fluids under pressure, etc.) before starting work.

HALT

Do not perform hot work until the fire or explosion risks have been eliminated.

AVOID

Do not walk or stand under a load.

BAN

Do not work under the influence of alcohol or drugs including driving.

STOP

Do not manipulate your phone or any other communication device while driving.

NO LIFE AT RISK

ENGIE One Safety

Our transformation journey to zero fatalities

Why?

As a global industry leader, all ENGIE's managers and employees have a duty to put health and safety first wherever they are and whatever they do

What?

The purpose of ENGIE One Safety is to achieve the sustainable elimination of serious and fatal accidents for all individuals working for the Group including contracted workers

How?

To succeed we all have to Think, to Talk and to Act:
“Never compromise on Safety”

Group Health & Safety Department
