

ENVIRONMENTAL POLICY

Tractebel - a leading global player in energy, water and infrastructure engineering - **aims to promote environmentally and culturally friendly sustainable development** and seeks to continually improve its performance in this area.

In putting these goals into practice, **Tractebel's management** focusses its environmental policy on four key commitments:

1. **Proactively minimize environmental and social impacts of our activities** and projects, striving to eliminate harm.
2. **Factor the environment into project lifecycles** so that our customers benefit from environmentally friendly, innovative solutions geared to their needs.
3. **Make all of our employees and all stakeholders aware** of the environmental challenges and the commitments applicable to our daily business.
4. **Comply with ENGIE's policy** on environmental responsibility and with labour and environmental legislation wherever have presence.

Tractebel communicates these commitments to all of its employees, subcontractors and other relevant Stakeholders while encouraging each one of them to act on these undertakings. Management supports the current environmental policy by ensuring that the resources needed for its correct implementation are in place.

To realise our policy and continually improve our environmental performance, we have implemented an IMS (Integrated Management System) that incorporates environmental management in accordance with ISO 14001 and other local certifications.

This Environmental Policy applies to all Tractebel subsidiaries and entities with a view to complying with our global objective of: "Achieving operational excellence by continuously monitoring and measuring stakeholder expectations, while considering them to improve our performance".
